

Contract Manager Advantages

- Contract Manager is a database that contains all of a client's telecommunications contracts including the contract name, supplier information, and the start and end dates of all contracts.
- The software separates each contract into its rate and rent components in order to track all billing aspects.
- Contract Manager contains historical, current, and future contracts.

Centralized Contract Management

- Contract Manager allows you to manage all of your telecommunications contract information from a central database.
- TMI has developed electronic tools to assist clients in moving batches of information quickly and efficiently for any moves, additions, or changes.
- With the aid of a powerful and flexible reporting tool clients can quickly determine contract expiry dates, assets associated with a contract, or specific rate and rent data contained in a contract. TMI Telebase uses the contract data to validate a supplier's e-Bill to insure that the client is paying the correct rates.

What are the Benefits?

- Insure you are **paying the correct contract rate** and that discounts are being applied correctly.
 - Improved **Telecom supplier management**.
 - Proactively analyze and **develop strategies for contract renewals**.
- Using specific contract information to **leverage better terms** when negotiating **new contracts**.
