

TMI Telebase Overview

TMI Telebase is a web-enabled suite of four integrated application modules. Its key functions are to electronically consolidate, manage, validate, and report all telecom expenses across an organization. The application modules are as follows:

- **Asset Tracker**
- **Contract Manager**
- **Bill-Rite**
- **Cost-Rite**

Control Your Telecom Expense Management

- TMI Telebase eliminates supplier billing errors, enhances telecom management, and reduces operating costs for our clients.

What are the Benefits?

- **Potential ROI in first year of operation:** Industry experts indicate potential **5 -15% savings** to your bottom line as a result of billing errors.
 - Consolidate **all telecom expenses** across your organization.
- Improve your company's ability to **analyze, budget, and plan telecom spending** by having accurate Telecom Asset and Contract information.
- **Enhance Business performance** with faster invoice auditing, processing cycles, and error detection and resolution.
